EXPERIENCE

Full Stack Engineer | AI Platform Startup

San Francisco, CA | Jul 2025 – Present

- Built and launched a multi-tenant AI document platform using React, TypeScript, Python, AWS Lambda, DynamoDB, and Amplify, taking the product from initial development to production in under 3 months on a 2-person team.
- Designed organization-isolated data models, document upload flows, REST API contracts, and customer-facing UI states, owning features from schema design through deployed React screens.
- Implemented an AWS Bedrock and Claude RAG workflow that chunks uploaded files, generates embeddings, retrieves relevant context, and returns schema-validated outputs for customer workflows.

Software Engineer, Full Stack | Mindly Care

Fremont, CA | May 2025 – Aug 2025

- Built QuickTrack clinical workflows across React and React Native in 6 weeks, including goal tracking, Goal Bank integration, activity review, approval flows, and reminders across web and mobile.
- Consolidated patient data from 4 clinical modules into a responsive dashboard and delivered a 12-screen mobile reporting suite with progress reports, trend analysis, and in-app PDF upload and viewing.
- Shipped 10+ responsive marketing pages and reusable UI components across mobile, tablet, and desktop experiences.

Software Engineer, Full Stack | SellMate.AI

San Francisco, CA | Jun 2024 – Aug 2024

- Built the end-to-end eBay OAuth 2.0 integration, including authorization, token exchange, encrypted storage, refresh, and account disconnection, enabling secure seller onboarding without cross-account data exposure.
- Integrated eBay Marketplace APIs into Node.js services for inventory retrieval, listing submission, and status synchronization, maintaining API latency below 200 ms and improving dashboard load performance by 45%.
- Developed an image-to-listing pipeline using OpenAI Vision & GPT-4 to extract product attributes and generate schema-validated titles and descriptions, reducing listing time from approximately 20 minutes to under 30 seconds per SKU.

Software Engineer | LTIMindtree

Hyderabad, India | Aug 2021 – Jul 2023

- Developed & maintained Java & Spring Boot services for Bread Financial's statement & billing platform, supporting file ingestion, validation, exception handling, reconciliation, & downstream processing of 10,000+ financial records per batch.
- Built a reconciliation module that compared source files with processed records and published exact mismatch details to Splunk, replacing manual file comparisons; also optimized SQL queries and database access to reduce average query time by approximately 30%.
- Resolved production batch failures by tracing Spring Boot logs, Splunk events, and database records, then performing controlled idempotent reruns; added unit and integration tests to CI and worked with business analysts and QA to validate billing rules before release.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, C#, Bash, HTML/CSS

Frontend: React, Next.js, React Native, responsive UI, reusable component libraries

Backend: FastAPI, Node.js, Express, .NET, REST APIs, GraphQL, OAuth 2.0, JWT, third-party integrations

Data: PostgreSQL, DynamoDB, Firebase, Neo4j, MS SQL, schema design, query optimization, migrations

Cloud & DevOps: AWS Lambda, EC2, S3, Amplify, Bedrock, Docker, Kubernetes, GitHub Actions, Jenkins, CI/CD

AI Systems: LangChain, RAG, embeddings, structured LLM output, agentic workflows, OpenAI API, Claude

PROJECTS

[AI Learning-To-Publishing Agent](#) | LangChain, FastAPI, PostgreSQL, Docker, Kubernetes

- Built an agentic platform that transforms technical notes and code examples into structured blog posts, LinkedIn content, and interactive quizzes through multi-step LangChain workflows.
- Implemented retrieval-grounded generation and source validation, then deployed the FastAPI and PostgreSQL application with Docker and Kubernetes using persistent storage, Secrets, health probes, and rolling updates.

[Billing, Invoicing and Transaction Management System](#) – C#/.NET · React · PostgreSQL · REST APIs

- Built a full-stack billing and invoicing system with barcode checkout, GST/discount calculation, partial payment tracking, invoice PDF generation, PostgreSQL-backed transaction records, and unit-tested pricing logic across edge cases.
- Designed transaction data models and REST APIs to manage invoice creation, payment status updates, customer records, billing history, partial payments, and failed/voided transaction states.

[InterviewBot](#) – Python · LangChain · Neo4j · GPT-3.5 · Streamlit · RAG

- Ingested and chunked 100+ pages into a Neo4j knowledge graph; LangChain retrieves top-k nodes at query time, FastAPI serves the inference endpoint, Streamlit handles the chat UI end-to-end.

EDUCATION

Northwest Missouri State University — MS, Computer Science — GPA: 4.0/4.0.

Maryville, MO | Aug 2023 – Dec 2024

Jawaharlal Nehru Technological University — B.Tech, CS — GPA: 3.6/4.0.

Hyderabad, India | Jun 2018 – May 2021
